                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides isolated nucleic acid sequences encoding a proto-
oncogene tyrosine kinase (poTK). The poTK polynucleotides and protein may
be used in the prevention, diagnosis and treatment of diseases associated
with inappropriate poTK expression, such as lung and kidney tumours,
leukemia and stomach adenocarcinoma. poTK may be used to treat disorders
associated with decreased expression by rectifying mutations or deletions
in a patient's genome that affect the activity of poTK by expressing
inactive proteins or to supplement the patients own production of poTK.
The encoded poTK may be used as an antigen in the production of
antibodies against poTK and in assays to identify modulators of poTK
expression and activity. The anti-poTK antibodies and antagonists may be
used to down regulate expression and activity and as diagnostic agents
for detecting the presence of poTK in samples. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             exon

                                                                                                             밁
                                                                                                                                            S
                                                                                                                                                                                                                                                                                                          The invention relates to a newly isolated peptide sequence of a human CC kinase that is related to the proto-oncogene tyrosine kinase subfamily. CC The activity of the kinase of the invention may be described as, CC cytostatic, antiarteriosclerotic, antiinflammatory and antipporiatic. Peptides of the invention are useful in assays to determine the CC biological activity of the protein, in drug screening assays, tissue CC typing and pharmacogenomic analysis. They are also useful in treating or CC diagnosing disorders characterised by an absence of, inappropriate, or CC unwanted expression of the protein, such as inflammation, cancer (e.g. CC leukaemia, lung tumours, kidney tumours or stomach adenocarcinoma), CC arteriosclerosis, and psoriasis. Nucleic acid molecules of the invention CC are useful as probes, primers and chemical intermediates in biological CC assays. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, aid in the identification CC the development of human therapeutic targets, aid in the identification CC therapeutic agence the protein and serve as targets for the development of human chromesome protein of the invention may also be useful in gene therapy. The gene encoding the protein of the invention has been localised to human chromesome 15. The current sequence

The peptide is useful for preparing a composition for treating a disease condition mediated by a human kinase protein e.g. cancer. The present sequence represents the human proto-oncogene tyrosine kinase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human kinase peptides, useful for preparing a composition treating a disease or condition mediated by human kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 15297 BP; 3267 A; 4306 C; 4478 G; 3246 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2004-282461/26.

Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treatings a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human gene of the invention encoding a protein that promotes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified protein that promotes type II collagen expression, useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 4; SEQ'ID NO 47; 271pp; English.

1 Wucleotide sequences of feline retroviral oncogenes (v-fes) provide evidence for a family of tyrosine-specific protein kinase genes cell 30 (3), 775-785 (1982)
the transforming polyprotein of the gardner-arnstein strain of feline sarcoma virus (fesv) include the transforming gene (fes) product with tyrosine specific protein kinase activity. the enc protein sequence was compared with the gene products of
                                                                           strain.
                                                                                                                                                                                                                                                                                                                                                                      feline sarcoma virus (gardner-arnstein) transforming gene.
